

# Assignment - Fundamentals of Java Enterprise Components

Create an enterprise application that will be used by AptechLibrary's staff. The application should have the features below:

- Allow staff to view all books in the library (code, name, author, borrowed or not)
- Allow staff to search books by code and name.
- Allow staff to view book details including borrow and return history.
- Allow staff to update the book status once it is borrowed or returned.

## **Requirements:**

- **The application will be implemented with the MVC model.  
Implementing DataBean Class(Optional).**

**Deadline: Before the last day of this module.**
